

Product Requirements Document (PRD)

Project Name: Tutor SaaS (Micro-LMS)

Version: 2.1 (Content-First Pivot)

Date: February 9, 2026

Status: 🏗️ Epic 1 Execution

1. Executive Summary

Vision: A "Shopify for Tutors." A white-label SaaS platform that allows individual educators (Math, Coding, Finance) to launch their own branded mobile app in minutes.

Core Differentiator: Unlike complex ERPs, this platform is **Content-First**. It focuses strictly on delivering study materials (PDFs, Videos, Quizzes) efficiently.

2. Functional Modules

⚡ Set 1: Quick Dissemination (The "WhatsApp Replacement")

Goal: Immediate sharing of unstructured resources.

1. **Quick Notes:** Upload PDF directly to a feed.
2. **Quick Video:** Upload/Link video directly to a feed.
3. **Hybrid Resource:** A single card containing both a Video and a Reference PDF.
4. **Independent Quiz:** A standalone assessment not tied to a specific chapter.

Set 2: Structured Learning (The "Course")

Goal: Comprehensive syllabus management.

- **Hierarchy:** Syllabus → Book → Chapter → Lesson → Quiz.
- **Lesson Content:** Each lesson contains a Video lecture and/or Reading material.
- **Assessment:** Every lesson can have an attached Quiz to verify understanding.

3. Technical Architecture

- **Backend:** FastAPI (Python) with Async SQLAlchemy.
- **Database:** PostgreSQL (Multi-Tenant Schema using `tenant_id` column).
- **Frontend:** Flutter (iOS/Android) using Riverpod & Dio.
- **Security strategy:** "Shared Database, Shared Schema" architecture. Data isolation is enforced via API Middleware (The Gatekeeper).
